↳ FOUNDED IN TSUKAYAMA, NIIGATA, JAPAN.  
CHASING HIGHER PERFORMANCE THROUGH  
CRAFT AND INNOVATION SINCE 1946.

## BEYOND WHAT I SEE

Years from now, this racquet will be lighter and stronger than you could ever picture. Fully packed with new innovations. All those innovations are bound to be discovered. They're all hidden, impatiently waiting to be uncovered.

When I get my hands on this racquet, it will be the culmination of thousands of ideas, tried and failed. It will be standing proof, that endlessly testing both expected and unexpected ideas will mold the basis for game-changing performance.

But this racquet won't uncover itself — not without a little imagination.

It's time I search beyond what I know today.

# ISOMETRIC™

SIGNATURE YONEX TECHNOLOGY SINCE 1980

**7% LARGER SWEET SPOT**

Developed over 30 years ago, the ISOMETRIC™ design increases the sweet spot by 7%\*. Compared to a conventional round frame, a square-shaped ISOMETRIC™ racquet generates a larger sweet spot by optimizing the intersection of the main and cross strings. ISOMETRIC™ technology delivers greater control without sacrificing power.

ISOMETRIC™ is a trademark of Yonex Co., Ltd.

## O.P.S. Oval Pressed Shaft

First introduced in 1969 with the T-7000 - our first aluminum tennis racquet - the Oval Pressed Shaft (OPS) is still incorporated into our most popular racquet series today. The Oval Pressed Shaft is designed to give players more spin, control, and feel. The shaft flexes at impact, increasing dwell time and minimizing vibrations.

## REVOLUTIONARY GRAPHITE

Staying true to our roots, our graphite is sourced and engineered in Japan, giving our research and development team the opportunity to utilize a wide range of materials that suits players of all levels.

### 2G-Namd™ Flex Force

Aggressive, attacking spin for pinpoint control is achieved through a carbon nanotube structure that binds the graphite fibers together, which reduces energy loss. Due to its resilient properties, the material flexes and provides quick snapback.

Namd™ is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

### 2G-Namd™ Speed

Designed to produce flex and power, 2G-Namd™ Speed is developed from high modulus graphite fibers bound with CNTs, resulting in a material that transfers energy into quick snapback.

Namd™ is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

## VDM Vibration Dampening Mesh

First used in our snowboards to reduce vibrations at impact, Vibration Dampening Mesh (VDM) is now used in four of our racquet series. VDM is a stretchy mesh material that is wrapped around the graphite within the grip to filter unwanted vibrations and improve touch and precision.

## -SERVO FILTER-

A transparent and elastic film placed between graphite layers helps bond the layers while maintaining its elastic characteristics even after the molding process. This unique film absorbs unwanted vibrations, provides fine-tuned flex and snapback to each shot, delivering precise sensory feedback from the ball to the hand.

SERVO FILTER is a vibration-absorbing film developed by the Mitsubishi Chemical Group, which has high bonding properties with graphite and excels in both flexibility and durability.

**CONTROL**

**PERCEIVE. CONTROL. CREATE.**

The all-new PERCEPT racquet series caters to the demands of mid to advanced-level players, who seek precise ball and trajectory control. Players can "Perceive, Control, Create" with PERCEPT by enhancing their ability to feel the ball, improve their control, and create their own distinct game on the court.

STIFF RACQUET  
FACE DESIGN

**FOR IMPROVED CONSISTENCY**  
The frame employs more layers\* of graphite to increase rigidity of the racquet face. 3% more stability on the racquet face, providing improved consistency in ball trajectory.

\*Compared to previous control-oriented racquet models.  
\*Tested by Yonex

FLEXCON SYSTEM

**MORE FLEXIBILITY**  
The tapered and elongated box frame allows the shaft to flex comfortably, extending the ball pocketing duration for more feel and control. The flexibility is enhanced by the "2G-Namd™ Flex Force," a highly elastic graphite that enables 15%\* more flexibility on the racquet shaft.

\*Tested by Yonex

SERVO FILTER

**PROVIDING VALUABLE FEEDBACK**  
A transparent and elastic film placed between graphite layers helps bond the layers. This unique film also absorbs unwanted vibrations, providing multiple benefits to the racquet.
